

Model Performance Comparison, $\delta^{15}\text{N}$

RF, XGB, KNN, and MLR Under Leave-One-Location-Out CV

Method	R ²	RMSE (permil)	vs RF
Random Forest	0.665 ± 0.015	6.17	—
XGBoost	0.660 ± 0.007	6.22	-0.005
KNN	0.282	9.03	-0.383
Multiple Linear Regression	-8.609	33.04	-9.274

Tree methods are the mean over 5 seeds, ±1 SD. KNN and MLR are single fits.
Predicting the overall mean would give RMSE 10.69 permil.
